

FROZEN DRINK MACHINE

Plug machine into a grounded outlet. Do not use an extension cord if possible. If extension cord is needed please make sure it is a heavy duty cord, 25' or shorter.

Mix ½ gallon of flavor with 2 gallons of water. If you are adding alcohol we recommend not adding more than 25%. Pour mixture into top of machine and put the switch to the snowflake position. Do not use water only, this will damage the machine.

The first batch of frozen drinks will be ready to serve in about 15 minutes. To dispense beverage, hold cup under knob and pull the knob towards you. If red light goes on, this means your mixture in the reservoir is getting low and you need to add more in top of machine.

½ gallon of flavor and 2 gallons of water will make 700 ounces of frozen drink. The machine is capable of making 155 10 oz. drinks per hour.

When finished for the day, turn off machine by putting top switch in center position and drain any leftover mix. You can refrigerate any leftover mix and it can be poured over ice. Pour 2 gallons of fresh water in top of machine, place upper switch in “faucet” position and let machine stir for 2 minutes. Turn machine off, drain and repeat for another 2 minutes. **DO NOT TAKE MACHINE APART!** If leaving the mix in machine overnight, put bottom switch in thermometer position.

Flavors available are Margarita, Pina Colada, Strawberry Daiquiri
